

## COMPANY BACKGROUNDER

---

### CODELOCKS: PROVIDING SMARTER ACCESS FOR EVERYONE

Codelocks designs and supplies access control solutions for doors and cabinets. We live by our family values and our business is built on respect and trust.

We pride ourselves on our expertise and making this accessible to our customers. By putting our customers first, we have grown our reputation for providing world-class support.

We constantly innovate to deliver world-class products. Codelocks sees technology as a key opportunity and our ability to innovate as we develop new products and services is core to our success.

### PRODUCTS

Codelocks offers an extensive access control range for a wide variety of applications including doors, cabinets, lockers and enclosures. Our products are designed to be user-friendly and to give building and facilities managers complete control over who is entering. From robust and stylish push-button mechanical locks and cutting-edge digital electronic locks, to KitLock locker locks, access controllers and smart locks that use the latest technologies, convenience is at the heart of all Codelocks products.

Codelocks locks are cost-effective, easy to fit and can be newly installed or retrofitted. Product lines include heavy duty locks that are ideal for high-traffic applications, locks with full-sized lever handles, and the option to choose between surface and mortice deadbolts and latches. The battery-powered high-end locks perform functions that were only previously available in hard-wired systems, relying on external power sources. Many products can be re-programmed on the door, without the need to remove the lock. Programming options include remote code generation, audit trail code tracking, code-free mode, along with a variety of other functions to suit customer needs.

Codelocks Smart Locks combine smart technology with traditional access control features. Our smart locks boast convenient access control with a remote code generation feature (NetCode), which allows codes to be issued remotely, using a web portal or smartphone app.

KitLock by Codelocks is a convenient and stylish alternative to traditional key-operated locker locks. Cabinets and lockers in any setting including gyms, leisure centres, schools, hospitals and offices can be opened using a keypad code, eliminating the inconvenience of coins and keys. The locks can be programmed with codes that are unique to the user or with time specific codes to grant temporary access. The option to use smart cards as an alternative to codes is also available. KitLock offers locks that feature NetCode, allowing multiple lockers and cabinets to be controlled by creating time-sensitive codes via the NetCode portal or API (application programming interface). Whether one or multiple KitLocks are purchased, there is full access to expert technical advice and customer support.

Key Secure by Codelocks is a range of simple and effective key control cabinets that allows management of keys 24 hours a day from a single or unique access code. Available in a variety of sizes and with mechanical or electronic digital coded lock options, Key Secure by Codelocks ensures that multiple keys, fobs and padlocks are kept secure and organised. Key Secure by Codelocks is suitable for real estate agents, car dealerships, offices and other business facilities that require key control to maintain the security of buildings, vehicles and equipment.

Access by Codelocks is a range of compact, standalone programmable door controllers. The A3 RFID, A3 Dual and A3 Vandal Resist door controllers act as a reader where users present credentials via a card or code to gain

entry. The A3 range provides proximity access control without the requirement of complex software purchases, external programmers or licensing costs. All models are RFID and MIFARE® compatible, are hardwired, work alongside existing magnetic locks and electronic strikes, and include a variety of functions to suit a wide range of access control requirements.

Products come packaged complete with everything needed for installation and are available for sale and delivery worldwide, to both commercial and domestic users. They can be purchased directly from Codelocks ([www.codelocks.com](http://www.codelocks.com)) and from a wide range of respected retailers and distributors.

## MANUFACTURING

Codelocks brand is synonymous with quality. Our locks are designed in the UK with smarter access for everyone in mind. The Codelocks factories are accredited with the ISO9001:200 quality standard. Having control of the production process gives Codelocks the confidence to offer product guarantees, including a limited lifetime warranty for every mechanical lock. This means that if the lock develops a manufacturing fault it will be repaired, serviced or replaced free of charge.

## CUSTOMER SERVICE

Codelocks has a dedicated technical team who take responsibility for getting things done and are on hand to respond to any questions or queries. The team draws on its expert knowledge to offer advice and support both pre- and post-sales, whether that involves specifying the right product for a specific application or providing installation instructions. From one-off orders to large contracts, the high level of customer service remains the same and our customers trust us to deliver on our promises.

We also offer industry-specific training courses that can be tailored to meet varying customer needs. These courses range from training locksmiths and installers on how to best install Codelocks products, to offering demonstrations to facility, estates and operations managers.

## MARKETS

Codelocks designs and supplies a wide portfolio of innovative, standalone keyless door locks and access products for a range of growing markets. Our products are suitable for a wide variety of applications and are specified by architects and architectural ironmongers to control access in new-build commercial or public sector buildings, or in existing buildings undergoing refit. Facilities, estates and maintenance managers buy our locks to install or replace outdated locks in buildings within the health, hospitality, education, office and leisure markets. Homeowners install our locks on sheds, garages, outbuildings, home offices and holiday rental properties.

## OFFICES

Founded in 1991, Codelocks is a global business with our company headquarters in the UK, based in Newbury, Berkshire. We have offices and distribution in California and Australia and a worldwide network of distributors, many of which are online. Products are therefore widely available to commercial and domestic users.
