

KL1000 Classic+

Introducing the KitLock KL1000 Classic+. Featuring all the benefits of the KL1000 Classic, the Classic+ model includes a 24hr auto-unlock countdown timer* and 20 User Codes.

When operating in Public Function, the KL1000 Classic+ can be programmed to auto-unlock between 1 and 24 hours after locking*. This eliminates the hassle of using the Master Code to open individual lockers at the end of each day, saving management time.

The KL1000 Classic+ offers up to 20 unique 4 digit User Codes when operating in Private Function, thus allowing a single cabinet to be accessed by multiple users.

These additional features make the KL1000 Classic+ ideal for applications in which cabinets are required to be shared i.e. laptop stores in schools, medical cabinets and shared lockers for shift workers. Available in Silver Grey and Black finishes.

Memory	Non-volatile memory will be retained
Fitting Options	Vertical, right hand and left hand
IP55 Rated	When used with rubber gasket (available separately)
Slam Latch	Retrofit to existing KL1000 locks or purchase for new locks. Easy shutting.

FUNCTIONS

Private Function

This is the default function and is already pre-programmed in new locks. This is used where the same code will be repeatedly used, e.g. an employee with a personal locker/drawer.

Public Function

In this function the KitLock operates with a single User Code. The user enters a personal four digit code, this locks the lock. The same code is entered once only to open the lock and is automatically erased. The lock remains open ready for the next user. This function is used for short term, multiple occupancy applications.

Not suitable for chlorine environments.

*Up to 24hrs. Locks can be configured to auto-unlock between 1-24hrs, within +/- 30 minutes of the time period.
